

The International Virtual Aviation Organisation was formed as a dedicated, independent, free of charge, organisation that provides a multiplayer "online" environment to the World Wide Web flight simulation community. To meet the expectations of our member, we provide a real-time integrated system for either flying as a Pilot or controlling as an Air Traffic Controller via the Internet with proven Software, Databases, Member Recognition/Training System and online Divisional Events.

We have...

- ... more than 58.100 members around the world
- ... more than 46 active divisions
- ... partially more than 500 members during the same time
- ... an exam and training system with different awards and ratings
- ... an online record with more than 1343 connections to the same time

- ... a real life weather and time system
- ... 25 network servers
- ... 22 voice servers

The Software

For Pilots

- IvAp - Our Pilot Client for the MS FS. IvAp allows a performance friendly connection to the network
- X-IVAP - Our Pilot Client for X-Plane users
- MTL - These are the libraries which includes all AI aircraft you need to see other pilots

For ATC

- IvAc - Our Controller Client. IvAc is based on real radar systems. On this screen you can see all informations that you need to guide an aircraft
- IvAi - This tool supports the use of two clients with one connection

IvAe - Our tool to get an overview about every connection at the network. The flight infos, FIR and Division infos and much more

Visit us at www.ivao.aero.

Here you'll find all information about IVAO and his members.

We hope to see you at IVAO...
