Tour and Multicrew

11 January
2019 Rev. 2

To: All IVAO users

The purpose of this document is to clarify the procedures to carry out IVAO Tours (both division and world Tours) flown in multicrew mode (or shared cockpit). Please consider that herein we will take into account only the multicrew mode made using the software IVAP and IVAI, IVAO official software.

While it is always possible for two users to fly any divisional Tour in multicrew mode, the pirep for the purpose of leg validation shall and will be filed and sent only by the user hosting the session, not both pilots

Only the primary connections hours and data will be logged, the secondary connection will only have aircraft position and operation data shared to their system.

WORLD TOUR LEGS ARE NOT TO BE FLOWN UNDER MULTICREW CIRCUMSTANCES.

World tour legs are to be flown by individual pilots and PIREPs in MODA logged as such

We do recommend, anyway, once you connect, to check carefully your actual connection to the IVAO network.

For any clarification or questions, please contact the Flight Operations staff.
